Vertilon Signs Exclusive Distribution Agreement with AP Technologies

Agreement Adds United Kingdom and Ireland to European Distribution Network

WESTFORD, MA (January 12, 2015) – Vertilon Corporation (<http://www.vertilon.com>), a leader in high performance charge integrating and photon counting data acquisition systems for silicon photomultipliers and PMTs, announced today that it has entered into an exclusive distribution agreement with AP Technologies of Bath, United Kingdom. The agreement allows AP Technologies to exclusively market and sell Vertilon's products throughout the United Kingdom and the Republic of Ireland. Vertilon's product portfolio is comprised of systems and instruments specifically designed to acquire signals from multichannel optical devices such as multianode photomultiplier tubes, silicon photomultipliers, and avalanche photodiodes. The company's products are used in diverse applications that include PET, SPECT, flow cytometry, fluorescence detection, confocal microscopy, LIDAR, and high energy particle physics. The agreement between the two companies is effective immediately.

About Vertilon Corporation (<http://www.vertilon.com>)

Vertilon manufactures advanced products for markets utilizing multi-anode photomultiplier tubes, avalanche photodiode arrays, silicon photomultipliers, and other multi-element charge-based sensors. Vertilon's core product line is the PhotoniQ, a family of high performance multi-channel data acquisition systems that interface to optical sensors and collect and process their output signals. Over the last seven years, Vertilon's PhotoniQ products have been used throughout the world by leading universities, government laboratories, and corporate R&D groups in applications that include particle physics, flow cytometry, bioaerosol detection, SPECT, positron emission tomography (PET), gamma cameras, DNA sequencing, and confocal fluorescence microscopy.

About AP Technologies (www.aptechnologies.co.uk)

AP Technologies has been a leading distributor of optoelectronic components in the UK and the Republic of Ireland since 2002. They supply an extensive range of cutting-edge optoelectronic components and systems for many applications including industrial, scientific, military, medical and hazard and threat detection.
